***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

Prior art of record fails to fairly teach or suggest applicant's catalyst support comprising hydroxyl groups, a capping agent comprising a boron containing Lewis acid and an ionic activator.

Prior art teaching from Zhuravlev discloses that the surface concentration of hydroxyl groups will be dependent on the temperature/vacuum treatment but not the type of silica. Zhuravlev fails to specifically disclose the amount of time for the dehydration of the silica support material. The capping agent would bond to the free

Art Unit: 1755

Si-OH groups left on the dehydrated (calcined) support as is taught in Wang, et al. (US 6211311 B1) which converts all of the free Si-OH groups to the boron containing Lewis acid to tethered form. The instant claims differ in that they require that at least some (e.g., cannot be equivalent to all) of the free Si-OH groups do not bind to the activator. None of the prior art disclose each of applicant's claimed limitations, especially "wherein at least some of the capping agent does not form a support bound activator".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
